Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

Supramolecular chemistry is the domain of chemistry beyond that of molecules that focuses on the chemical systems made up of a discrete number of assembled molecular subunits or components. The forces responsible for the spatial organization may vary from weak (intermolecular forces, electrostatic or hydrogen bonding) to strong (covalent bonding), provided that the degree of electronic ...

An international Chemistree Journalis: Slightly different to the often-seen Christmas Chemistree varieties, this one is truly unique to our journal. Growing out of a Periodic Earth, which itself represents the fact that despite the name, our authors are not just based in Europe, but all over the globe, we are using this Cover to highlight Chemistry - A European Journal's work in celebrating ...

Carries water: Studies on water adsorption and transport on oxidized 2 D carbon materials have attracted increasing interest owing to their applications in various research fields such as sensing, energy conversion, and membrane separation. Herein, the recent progress on water adsorption and transport on oxidized 2 D carbon materials is reviewed, together with its application in proton ...

The inherent specificity and electrochemical reversibility of enzymes poise them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators or tedious biofunctionalization approaches.
