www.caeai.com 2 Fatigue Analysis in ANSYS There are two general categories of fatigue analysis: " Fatigue based on crack formation. " Fatigue based on crack growth. The choice of analysis type is based on the given application. " When in the design phase, or for components requiring only a few cycles of life, crack formation may be sufficient.

ANSYS AUTODYN Explicit Software for Nonlinear Dynamics

Develop the basic skills necessary to implement complete Explicit Dynamics solution procedures in ANSYS Mechanical. Efficiently simulate the dynamic response of highly transient, highly nonlinear physical phenomena like drop testing, metal forming, and ballistic impact.

1. Introduction. Casing strings for oil and gas exploration and production are generally formed by threads. The use of threaded connection instead of welding is justified by the major productivity and the reversibility of the threaded connections 1.. Dynamic loading is common in connection service conditions.

Abstract. In today's scenario, the main weightage of investigation is to reduce the weight of product while upholding its strength. To solve problem in this regard composite materials play an important role.

Given a transformation between input and output values, described by a mathematical function f, optimization deals with generating and selecting a best solution from some set of available alternatives, by systematically choosing input values from within an allowed set, computing the output of the function, and recording the best output values found during the process.
