### Linear Algebra and Its Applications, 4th Edition: Gilbert

In linear algebra, the column space (also called the range or image) of a matrix  $A$  is the span (set of all possible linear combinations) of its column vectors. The column space of a matrix is the image or range of the corresponding matrix transformation. Let  $F$  be a field. The column space of an  $m \times n$  matrix with components from  $F$  is a linear subspace of the  $m$ -space.

A scalar is an element of a field which is used to define a vector space. A quantity described by multiple scalars, such as having both direction and magnitude, is called a vector. In linear algebra, real numbers or other elements of a field are called scalars and relate to vectors in a vector space through the operation of scalar multiplication, in which a vector can be multiplied by a number ...
