Applied Statistics for Evaluators. Instructor: Theodore H. Poister, PhD Description: In this class students will become familiar with a set of statistical tools that are often used in program evaluation, with a strong emphasis on appropriate application of techniques and interpretation of results.

Analytic Approaches â€“ TEI | The Evaluators' Institute

Introduction to CHAPTER1 Statistics LEARNING OBJECTIVES After reading this chapter, you should be able to: 1 Distinguish between descriptive and inferential statistics. 2 Explain how samples and populations, as well as a sample statistic and population parameter, differ.

Introduction to Statistics - SAGE Publications

If you think my writing about statistics is clear below, consider my student-centered, practical and concise Step-by-Step Introduction to Statistics for Business for your undergraduate classes, available now from SAGE. Social scientists of all sorts will appreciate the ordinary, approachable language and practical value â€“ each chapter starts with and discusses a young small business owner ...

Intraclass Correlations (ICC) and Interrater Reliability

Cohenâ€™s kappa takes into account disagreement between the two raters, but not the degree of disagreement. This is especially relevant when the ratings are ordered (as they are in Example 2 of Cohenâ€™s Kappa). To address this issue, there is a modification to Cohenâ€™s kappa called weighted Cohen ...

Statistics Books for Machine Learning

The Birth of Probability and Statistics The original idea of "statistics" was the collection of information about and for the "state". The word statistics derives directly, not from any classical Greek or Latin roots, but from the Italian word for state.. The birth of statistics occurred in mid-17 th century. A commoner, named John Graunt, who was a native of London, began reviewing a weekly ...

The Friedman test is a non-parametric alternative to ANOVA with repeated measures. No normality assumption is required. The test is similar to the Kruskal-Wallis Test. We will use the terminology from Kruskal-Wallis Test and Two Factor ANOVA without Replication.. Property 1: Define the test statistic. where k = the number of groups (treatments), n = the number of subjects, R_j is the sum of the ...

Decision tree learning is one of the most widely used and practical methods for inductive inference. It is a method for approximating discrete-valued functions that is robust to noisy data and capable of learning disjunctive expressions. This chapter describes a family of decision tree learning algorithms that includes widely used algorithms such as ID3, ASSISTANT and C4.5.
