Radio-frequency identification (RFID) uses electromagnetic fields to automatically identify and track tags attached to objects. The tags contain electronically-stored information. Passive tags collect energy from a nearby RFID reader's interrogating radio waves. Active tags have a local power source (such as a battery) and may operate hundreds of meters from the RFID reader.

In addition to the supply chain, further data could be written in to the Blockchain. These include the origin of

the raw materials (fabric, twine), any changes in state that occur including transfers of ownership, various environmental conditions (temperature, humidity) and the working conditions and compensation of factory employees.
