In physics, a field is a physical quantity, represented by a number or tensor, that has a value for each point in space-time. For example, on a weather map, the surface wind velocity is described by assigning a vector to each point on a map. Each vector represents the speed and direction of the movement of air at that point.

Vessel complexity and limited graphite lifetime (4 years) in contact with the molten fuel salt, oriented ORNL towards the construction of a simpler single-fluid reactor design: the Molten-Salt Reactor Experiment (MSRE) (MacPherson, 1985). This 8 MWth test reactor went critical in 1965 and operated with great success in a thermal neutron spectrum for 4.5 years until its shut down in December 1969.
